

## Data iSight

Data iSight is a patented, defensible alternative to U & C or Medicare-based reductions for out-of-network charges. Using publicly available claim data and a unique benchmarking process, it calculates fair reimbursement that is cost-based for facilities and median reimbursement-based for practitioners.

Results are consistent, repeatable and widely-accepted by health care providers, and integrated appeal management takes the burden off you while helping to limit patient balance billing.

Technology that supports customization to maximize your out-of-network savings.

Data iSight's flexibility lets you:

**Strategize.** Use it for both insured and self-insured plans, as a cost-management strategy or as the benefit limit defined in plan documents. Use it as the sole non-network strategy or as the final stop.

**Configure.** Apply it to specific claim type(s), with or without negotiation on appeal and with or without patient advocacy. It can also be configured to help comply with state regulations governing out-of-network reimbursement.

**Override.** Can accommodate your defined parameters, such as a ceiling below which Data iSight must price or a "never pay more than" business rule.

In addition to our analytics-based services, MultiPlan offers payment integrity and network-based services to help payers manage the cost of care. With one claim submission, you can access all our services. Call 1-866-750-7427 or email [sales@multiplan.com](mailto:sales@multiplan.com) for more information.
